

Celora™ Vita

Celora™ Vita is our new injectable treatment designed to improve skin quality from within.

Unlike treatments that focus on adding volume, it delivers a precise combination of 9 amino acids and hyaluronic acid, helping to restore the essential building blocks the skin needs to repair, renew, and function optimally.

As these key components decline over time, the skin can lose firmness, hydration, and radiance. Celora™ Vita works to rebalance this, supporting a process known as biorestitution for healthier, more resilient skin.

Benefits include:

- Improved hydration and radiance
- Smoother, more refined texture
- Enhanced firmness and elasticity
- Softening of fine lines

Results develop gradually over a course of treatments, delivering natural-looking improvements in overall skin quality.

True skin biorestitution begins beneath the surface.
